SUMMARY

Full-stack developer with hands-on experience building and shipping production applications across frontend, backend, integrations, and AI-enabled features. At Map of Pi, I have contributed to a commerce platform serving 2M+ users, working across performance, user experience, monetization, and end-to-end product development.

Alongside my full-stack work, I have built and experimented with AI-driven products using different approaches depending on the problem, including recommendation systems, LLM integrations, and AI-assisted tooling.

EXPERIENCE

Map of Pi — Core Application Developer

Oslo / Remote · (Feb 2024–Present)

- Built and evolved core commerce features for an application serving 2M+ users, including search and discovery, seller listing flows, push notifications, and rewarded ads.
- Improved frontend performance through lazy loading, render optimization, and reusable component architecture.
- Built a tiered membership system with usage allowances, referral logic, and monetization flows.
- Integrated the Pi SDK for authentication and payments across core commerce flows.

Bosant — Frontend Developer (Shopify & Brand Experience)

Oslo / hybrid · (Feb 2026 – Present)

- Leading the digital rebrand of Bosant's Shopify storefront, transforming a generic theme into a distinct experience tailored to the brand.
- Redesigned the storefront across layout, typography, spacing, color, product presentation, and responsive behavior to establish a cohesive visual system.
- Worked through deeply nested Shopify theme structures and third-party wrappers to override existing behavior and implement the new design without rebuilding the store from scratch.

Outlier AI — AI Training Specialist (Part-time)

Oslo / Remote · (Nov 2024 – Present)

- Evaluated and compared large language model outputs across coding, reasoning, and language tasks using predefined guidelines.
Assessed LLM responses for quality, accuracy, instruction-following, and reasoning across different prompt structures.

Upwork — Full-Stack Developer (Freelance)

Oslo / Remote · (Nov 2023 – Present)

- Completed short-term client tasks such as bug fixes, minor feature additions, and small performance improvements.
 - Collaborated directly with clients to scope requirements and deliver solutions efficiently.
-

PROJECTS

Whispr — AI-powered film curation built around emotional intent

- Built an emotion-led recommendation flow using craving and intensity, with AI curation, contextual refinement, conversational follow-up, and TMDB-backed film metadata.

Reset with Context (RWC) — Project-aware continuity for AI-assisted work

- Building a local-first tool for preserving AI work history across sessions through source-linked context, key decisions, corrections, open questions, checkpoints, and clean handoffs.
-

SKILLS

Frontend: React, TypeScript, JavaScript, Next.js, HTML, CSS

Backend: Node.js, Express, MongoDB

AI: LLM APIs, AI integrations, prompt engineering

Tools: Figma, Git, REST APIs
